### **Battery Powered Rate Totalisers for Safe & Hazardous Areas**

BEKA associates have introduced two new battery powered, field mounting rate totalisers that will operate continuously for five years from a replaceable internal battery. The instruments display rate and total flow simultaneously and may be used with most pulse output flowmeters.

The BA344D intrinsically safe model has ATEX Group II Category 1G (Ex ia IIC T5) certification. The BA544D is for use in safe areas.

Both models have a robust IP66 GRP enclosure with a separate terminal compartment. Control push-buttons are located behind a sealed cover, but for applications requiring frequent adjustment, the totalisers can be supplied with an external membrane keypad.

Optional dual alarms further extend the application of these instruments. Both models are available from stock and are guaranteed for three years.
